## Product Portfolio

Innovative Medical Devices

BioCer Entwicklungs-GmbH is a young and innovative medical device company located in Bayreuth, Bavaria. We are specialized in research, development and production of innovative medical biomaterial products without animal or human components. Being a service provider, we offer innovative coating systems for existing implant systems and also develop new medical products for our customers. This results in currently 3 product groups: Haemostasis, Surgical Mesh and Coating.

**Biological  
Medical Devices**

**Haemostasis**

**Surgical Mesh**

**Coating**

**BioCer**

## Haemostasis

We offer a variety of plant based haemostatic solutions for a wide range of surgical treatments. Additionally, we developed innovative accessories related to our main items.

## Surgical Mesh

Surgical mesh implants specially indicated for repair of soft tissue defects and for the reconstructive and medically indicated plastic-aesthetic breast surgery.

## Coating

By applying ceramic coatings with a thickness of only a few nanometers, we generate biocompatible, anti-allergic, osteoconductive or antibacterial properties or even combinations thereof.
